## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-7 and 12-14 are allowed.
2. The following is an examiner's statement of reasons for allowance: A search of the prior art does not disclose or reasonably suggest a method of producing a single crystal of LnCuOX as claimed in claims 1 and 10 wherein a base film is grown on a single crystal substrate, an LnCuOX film is deposited thereon and heated to 500 degrees Celsius or more in a vacuum.

The closest found prior art of Ueda (Appl. Phys. Lett. Vol. 77 and Vol. 78, as cited on IDS) teaches a method of forming LnCuOX films on a substrate and heating to 800 degrees Celsius in a vacuum, but that the resulting film is polycrystalline, not single-crystal (Left Column, Page 2334). Ueda does not disclose or reasonably suggest that the substrate is single crystal or that a base film be grown on the substrate. Ueda further suggests that a method to produce a single-crystal LnCuOX still needs to be developed (Right Column, Page 2335).

The closest found prior art of Takano (J. Alloy & Compds.) teaches forming LnCuOX single-crystal films by depositing polycrystalline LnCuOX on a substrate (quartz tube) and heating above 500 degrees Celsius in a vacuum (Left Column, Page 222), but does not disclose or reasonably suggest that the substrate is single crystal or that a base film be on the substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
